

SpeechPOD Voice Warning System (Part No SPK-POD-A)

Description

SpeechPOD is the first portable, user programmable voice messaging system of its type.

SpeechPOD is designed to provide a call to action whenever a person is detected within the vicinity.

When triggered from its on board motion sensor, the SpeechPOD will output a clear voice message to remind staff and visitors of a special risk or hazard.

A voice message from the in built speaker announces

'Caution, this floor has just been cleaned and may be wet and slippery...please take care

Blind and partially sighted persons are made fully aware of impending danger.

SpeechPOD ensures that DDA (Disability Discrimination Act) requirements are met in full.

SpeechPOD can be supplied as a stand alone product where the messages are selected by the on-board DIL switches.

Alternatively, you may purchase the infra-red remote control unit (part no CSA-IRR) to select messages, control volume, select time delays and also switch the SpeechPOD on and off when required.

The CSA-IRR is universal, and will operate any SpeechPOD that you may have on site. Site Managers need only attach the CSA-IRR to their key fob and operate any SpeechPOD

Typical Uses for SpeechPOD are:

Infection Control

Slip & Fall

Eye Protection

Point of Sales Merchandising

Hygiene Standards (wash & Sanitize hands)

Special Risk Areas

No Smoking Areas

Secure or Prohibited locations

Custom Voice Messages

SpeechPOD has the flexibility to allow users to program their own unique messages in one or more languages, accents and dialects

SpeechPOD is a truly universal product; any language; any risk; any location

Product Features Include:

- 7 user message areas
- Infra-Red Remote Control
- On board PIR Activation
- Pressure Pad Activation
- Door Contact Activation
- Adjustable Volume Control
- Battery or Mains Powered
- Portable or Fixed Install
