

*SaniSecure Cleanable, Hygienic Tethers*

SaniSecure is a new product aimed at solving the problem of keeping the patient call pendant within easy reach of the patient.

SaniSecure is completely durable and is easily sanitized along with the patient call pendant.

SaniSecure avoids unnecessary damage to bed linen and patient call systems, by quickly slipping free if a large force is applied.

SaniSecure is the sister product to the highly successful SaniPull product, and is manufactured from the same highly durable vinyl and incorporates a plastic spring clip that is specifically designed to securely and safely attach patient communication pendant cords to bedding or bed frames for easy retrieval.

A perturbing feature of any current metal clip attachment system is its potential to cause abrasions and nips to patients and staff from the sharp metal teeth on the spring clip, leading to possible infection. Invariably therefore, communication cords are wrapped or tied around bed frames, and when the bed is moved, the pull cord receptacle is dislodged, causing unwanted maintenance and loss of bed space.

Similarly pendant cords are secured by attaching the metal clips to bedding leading to the linen becoming frayed or torn, with textile costs rising by some 38%, linen replacement is becoming a budgetary concern. SaniSecure's unique construction negates both the possibility of physical harm and will preserve linen stocks and reduce replacement overheads.

SaniSecure is available in both 50mm for nurse call cords and a 250mm configuration, for use as an equipment securing strap for areas when infection control procedures are in place. It is ideal for keeping stethoscopes and other equipment accessible.

Its easy fit simplicity, safety attributes, and the budget saving potential is sure to make SaniSecure the first choice for many facilities.
